ProSMART

Intelligently monitor and document Safety Instrumented System (SIS) data across multiple platforms in real-time.

ProSMART helps facilities optimize testing time during both planned and unplanned shutdowns by allowing for validation, revalidation and modification of events during normal operations. ProSMART pulls data from multiple SIS systems into a single view where trips, events, and failures can be viewed, responded to, and documented all in one integrated solution, reducing manhours and costs.

BENEFITS

- Reduce downtime
- Optimize testing during scheduled and unscheduled downtime
- Multi-system data access
- Documentation and reporting
- Identify problematic devices
- Reduce labor and costs
